FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

- The end of the longest U.S. government shutdown allowed economic data to be released again, giving investors more visibility. Expectations for a rate cut in December were very volatile. They fell below 50% after hawkish comments and strong increases in services prices, before rising again above 70% at the end of the month following more dovish remarks from the New York Fed President.
- In the United States, recent data showed a mixed picture. Activity in the services sector improved, with the ISM at 52.4, while manufacturing remained in contraction at 48.7. The labor market also sent mixed signals, with job creation above expectations but more announced layoffs and slightly higher unemployment. Consumer spending weakened, with lower retail sales and softer household confidence.
- In this context, the US yield curve steepened, with the 2-year and 10-year Treasury yields falling by 8 bps and 6 bps respectively, while German yields moved in the opposite direction, rising by 6 bps on both the 2-year and the 10-year. Credit generally performed well, with the iTraxx Xover tightening by 10 bps to 256 bps, while European IG credit lagged, pressured both by rising rates and a very heavy primary market supply throughout the month.
- In November, monetary policy decisions continued to diverge across emerging markets. Brazil left its policy rate unchanged, maintaining its pause for a third consecutive meeting, while Bank Indonesia also kept its rate steady. By contrast, Mexico cut its rate by 25 bps to 7.25% as part of its ongoing easing cycle, and South Africa lowered its rate by 25 bps to 6.75% following its first reduction since mid-year. This environment supported emerging-market debt, benefiting hard-currency bonds from the easing in U.S. yields and especially local-currency markets from accommodative monetary policies.
- On the currency front, November saw mixed performances across emerging markets. Latin American currencies such as the Colombian peso, Mexican peso and Argentine peso, as well as Central European currencies including the Hungarian forint and Czech koruna, outperformed against the U.S. dollar. In contrast, several Asian currencies notably the Indonesian rupiah, New Taiwan dollar and South Korean won modestly underperformed over the month.

PERFORMANCE COMMENTARY

- Over the month, the Fund delivered a positive performance, however slightly below its reference indicator.
- The fund's hard-currency sovereign exposure slightly weighed on performance, particularly our position in Egypt this month, as well as our credit protection due to a tightening in spreads.
- Our local rate strategies contributed positively to performance, driven by our long position in South Africa, Brazilian and Poland rates. On the other hand, our exposure to Colombian rates weighed on performance.
- On the currency front, the Fund benefited from its Latin American currency exposures, such as the Chilean and Colombian pesos, along with its exposure to the South African rand.

OUTLOOK AND INVESTMENT STRATEGY

- In the context of easing inflation, diverging monetary policies, persistent geopolitical risks, and the end of the US government shutdown, we expect central banks to maintain an accommodative bias. We therefore keep a relatively high modified duration, around 650 basis points, through a balanced exposure to local and hard-currency bonds.
- We maintain our exposure to local debt, favoring countries with high real yields such as Poland, South Africa, the Czech Republic and Hungary, as well as Brazil and Peru in Latin America, while reducing our exposure to Colombia. Conversely, we hold short positions in developed markets, particularly the United States and Japan.
- Regarding hard-currency emerging debt, we continue to favor high-yield issuers, maintaining diversified exposure to countries such as Côte d'Ivoire, South Africa, Egypt, and Turkey, which offer attractive yields despite solid fundamentals and therefore appear mispriced by the market.
- Although the credit segment continues to offer attractive carry, particularly in the energy and financial sectors, we have reinforced our credit hedges through the iTraxx Crossover index, given tight spread valuations.
- Finally, we remain cautious on currencies, slightly increasing our significant exposure to the euro and modestly raising our allocation to the US dollar. We also hold selective positions in emerging-market currencies, particularly those of commodity exporters in Latin America (Chilean peso, Brazilian real) and Africa (South African rand), while maintaining exposure to certain Asian currencies (Indonesian rupiah, Kazakhstani tenge).

PORTFOLIO ESG SUMMARY

This financial product is classified Article 8 of the Sustainable Finance Disclosure Regulation ("SFDR"). The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product are :

- A minimum of 10% of the Sub-Fund's net assets are invested in emerging market sovereign or quasi sovereign debt issuers within the top quartile of the sustainability score distribution ($\geq 2.8/5$) or green, social, sustainable and sustainability-linked corporate or sovereign bonds;
- Corporate bond Investment universe is actively reduced by at least 20%;
- ESG analysis applied to at least 90% of issuers;
- The minimum levels of sustainable investments with environmental and social objectives are respectively 1% and 1% of the Sub-Fund's net assets;
- The Sub-Fund will exclude sovereign debt with a score of 2.5/5 or below in the proprietary ESG sovereign model.

SUSTAINABLE INVESTMENTS (NET ASSETS)

Our Proprietary **ESG Sovereign Score** identifies ESG related risks and opportunities and integrates them in investment decisions. The approach uses objective data from public sources and qualitative adjustments can be performed to reflect recent events not yet factored into the indicators. Numerical scoring system goes from 1 (Bad) to 5 (Good).

For the assessment of the **Green, Social, Sustainable and Sustainability-Linked-Bonds**, the Bloomberg sustainable debt indicators are used for screening of company debt securities which have self-reported sustainability features. Considerations such as whether the instrument is classified under recognised market standards (International Capital Markets Association or Climate Bond Initiative) or have third party assurance are important to our assessment.

GLOSSARY

Alpha: Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

Beta: Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund “cushions” the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund “magnifies” the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

Capitalisation: A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

Duration: A bond's duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

High yield: A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Investment/net exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Modified duration: A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Rating: The rating measures the creditworthiness of a borrower (bond issuer).

SFDR Fund Classification: Sustainable Finance Disclosure Regulation (SFDR) 2019/2088. EU Act that requires asset managers to classify funds into categories, “Article 8” funds promote environmental and social characteristics, “Article 9” funds have sustainable investments as a measurable objective. In addition to not promoting environmental or social characteristics, “Article 6” funds have no sustainable objectives. For more information, please refer to <https://eur-lex.europa.eu/eli/reg/2019/2088/oj>

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

SICAV: Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

VaR: Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

Yield to Maturity: Yield to Maturity (YTM) is the estimated annual rate of return expected on a bond if held until maturity and assuming all payments made as scheduled and reinvested at this rate. For perpetual bonds, the next call date is used for computation. Note that the yield shown does not take into account the FX carry and fees and expenses of the portfolio. The portfolio's YTM is the weighted average individual bonds holdings' YTM within the portfolio.

ESG DEFINITIONS & METHODOLOGY

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see “MSCI ESG Fund Ratings Methodology”, Section 2.3. Updated June 2023. <https://www.msci.com/documents/1296102/34424357/MSCI+ESG+Fund+Ratings+Methodology.pdf>

Principal Adverse Impacts (PAI): Negative, material, or potentially material effects on sustainability factors that result from, worsen, or are directly related to investment choices or advice performed by a legal entity. Examples include GHG emissions and carbon footprint.

Sustainable Investments: The SFDR defines sustainable investment as an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Taxonomy Alignment: In the context of an individual company, taxonomy alignment is defined as the proportion of a company's revenue that comes from activities that meet certain environmental criteria. In the context of an individual fund or portfolio, alignment is defined as the portfolio-weight weighted average taxonomy alignment of included companies. For more information, please follow this link: https://ec.europa.eu/info/sites/default/files/business_economy_euro/banking_and_finance/documents/sustainable-finance-taxonomy-faq_en.pdf

(1) of the amount you pay in when entering this investment. This is the most you will be charged. Carmignac Gestion doesn't charge any entry fee. The person selling you the product will inform you of the actual charge.

(2) We do not charge an exit fee for this product.

(3) of the value of your investment per year. This estimate is based on actual costs over the past year.

(4) of the value of your investment per year. This is an estimate of the costs incurred when we buy and sell the investments underlying the product. The actual amount varies depending on the quantity we buy and sell.

(5) when the share class overperforms the Reference indicator during the performance period. It will be payable also in case the share class has overperformed the reference indicator but had a negative performance. Underperformance is clawed back for 5 years. The actual amount will vary depending on how well your investment performs. The aggregated cost estimation above includes the average over the last 5 years, or since the product creation if it is less than 5 years.

(6) Please refer to the prospectus for the minimum subsequent subscription amounts. The prospectus is available on the website: www.carmignac.com.

MAIN RISKS OF THE FUND

EMERGING MARKETS: Operating conditions and supervision in "emerging" markets may deviate from the standards prevailing on the large international exchanges and have an impact on prices of listed instruments in which the Fund may invest. **INTEREST RATE:** Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments. **CREDIT:** Credit risk is the risk that the issuer may default.

The Fund presents a risk of loss of capital.
